

YOUNESS LAGMAH

Mobile & Backend Developer

uneslagmah@gmail.com | +212 666394945 | Morocco | ylagmah.tech

SUMMARY

Mobile and Backend Developer with over 6 years of experience building Android, iOS, and backend applications. I have worked on apps with 1M+ downloads and production systems serving hundreds of thousands of users. Experienced with Kotlin, Jetpack Compose, Kotlin Multiplatform, Laravel, Firebase, and native development. Comfortable working across the full development cycle, from designing and building features to testing, deployment, and maintaining production applications.

TECHNICAL SKILLS

- **Mobile Development:** Android, iOS, Jetpack Compose, Kotlin Multiplatform (KMP), Compose Multiplatform (CMP), SwiftUI.
- **Backend Development:** Laravel, Node.js, Firebase, REST APIs.
- **Programming Languages:** Kotlin, Java, Swift, C, C++.
- **Tools & Cloud:** Docker, Git, Firebase, DevOps workflows.

PROFESSIONAL EXPERIENCE

Senior Mobile Developer | *DONE CORP*

2026

- Engineered a comprehensive "super app" platform facilitating food and grocery delivery services.
- Developed a dedicated partner portal application to streamline store order management workflows.
- Built a specialized driver application to optimize delivery operations and logistics seamlessly.

Professional Freelancer

2021 – Present

- Architected, built, and delivered customized mobile applications for a diverse international client base.
- Maintained exceptional customer satisfaction and high ratings through effective communication, adaptability to changing requirements, and on-time project delivery.

Web Developer

2020

- Designed and built websites to master core web technologies and establish a strong foundation in software engineering.

FEATURED PROJECTS

- **JPEG Image Compressor & Resize:** Developed a fast, lightweight Android application for image optimization with batch processing support. Achieved 1M+ downloads on Google Play with consistently strong user ratings.
- **DONE:** Built a cross-platform food delivery application (Android/iOS) using Kotlin Multiplatform and Compose Multiplatform. Shared core business logic across platforms while maintaining native performance and seamless payment integrations.

- **TTboost:** Created an Android utility app using Jetpack Compose, Hilt for dependency injection, and Ktor for networking. Successfully migrated the backend infrastructure from Firebase to Laravel to enhance performance, scalability, and query control.
- **Video Resizer & Compressor:** Engineered an Android video optimization tool featuring a modern UI built with Jetpack Compose. Integrated FFmpeg and Media3 for powerful media handling and efficient compression capabilities.
- **Video Downloader Reels Saver:** Developed an Android utility for downloading social media content via direct links. Implemented secure user session handling to support authenticated downloads and fast media retrieval.
- **VPN App:** Built a modern Android VPN application powered by OpenVPN with a custom backend and AdMob integration for monetization.

EDUCATION & PROGRAMS

Low-Level Programming Student | 1337 Coding School

2024 – Present

- Mastering low-level programming concepts and problem-solving methodologies through C and C++.

ProgramParticipant | UM6P Explorer

2025

- Completed a 3-month business accelerator program focused on transitioning ideas into successful, market-ready projects.

Baccalaureate

2021

- Earned high school diploma.

SPOKEN LANGUAGES

- **Arabic:** Native
- **English:** Professional
